

Energy Balancing Through the Pulse of Crystals

By Ulrich Arndt

Translated from the German publication *esotera*

They alleviate stress, reduce the negative effects of electric smog, relax and contribute to spiritual evolvment: Pulsors assist in balancing one's energy through millions of micro-crystals.

Originally – more than 30 years ago – they were only thought of as small, practical Christmas gifts for friends. However, the recipients were so delighted and enthusiastic about their effects – stress reduction, relaxation and increased sense of wellness – that they pressured the inventor, the American aeronautics engineer, molecular physicist and naturopathic physician Dr. George T.F. Yao, to perfect the “energizers” further and to offer them for sale. That’s how the first Pulsors came into being.

The red, green, blue, black and golden donut-shaped plastic encased rings with a diameter of approx. five centimeters, are placed by the therapist on specific areas of the body, where they deploy their energetic effects. Each Pulsor color contains slightly different and specially tuned microcrystals, and their mysterious “inner life” promotes the harmonization of the energy field.

In a typical balancing session noticeable relaxation is felt, gradually tight muscles relax and energetic blockages are eased.

Additionally, when used regularly, the immune system is strengthened and the healing effectiveness of other therapies is enhanced. Therapists and individual users report that vitality and joy of living are also increased.

This unique method of relaxing neuromuscular tension and energy balancing is called “Pulsor Balancing”. This method is based on many years of research conducted by Dr. Yao and involves a fine-tuned approach to the various polarities and energy vortexes of the human aura or energy field. (See Vortex Center Chart)

As molecular physicist, Yao worked with the manufacture of suitable materials for the stratification of control capsules of American satellites, which were expected to return to earth. In the early seventies he began using the knowledge acquired through this work for the creation of the first Pulsors for public use to assist in protecting human energy fields from hazardous “electro-smog”. Yao suspected at that time that such protection was urgently needed, since the exposure to artificial electromagnetic radiation can be as high as 200 million times greater than those of natural fields. Yao suspected early on – and which has been verified since – that constant exposure would contribute to relentless stress and tension, diminished immune response and could even contribute to psychic disturbances like unexplained anxiety states.

The physicist combined different mixtures of special, microscopically small crystals, which capture the electromagnetic waves in different bandwidths of wave length and frequencies and neutralize them. Millions of these microcrystals derived from gemstones, semi-precious stones and minerals are combined and stacked in many extremely thin

ENERGY BALANCING THROUGH THE PULSE OF CRYSTALS

layers and arranged in specific predetermined patterns. The size and arrangement establishes the wave length and frequencies, with which the specific Pulsor can resonate.

According to the well-known American scalar wave theorist Colonel T.E. Bearden, Pulsors have a gigantic, complex, exactly ordered inner structure, which makes them scalar crystals. That means the crystal is capable of interacting with scalar waves and with the information they transmit.

Although ignored so far by the scientific community, it is suspected that these scalar waveforms have a great significance for the energy and information transmission of living things. (see *esotera* 7/2000 "The Energy from the Void")

Yao constructed several additional Pulsor models in subsequent years with names like *Angel*, *Ultima Delta*, *Galactical Pulsor* and *Standard Professional*. These are designed to harmonize the various energy fields and frequencies of the human body and bring about a natural pulsation (consequently the name Pulsor). The human energy field is further strengthened two to three times and the aura expands. The expansion of energy radiation (emanation) can clearly be seen in Kirlian photographs. This is interpreted as aura-loading through Pulsors.

Yao also constructed a Pulsor card as protection against negative effects of everyday radiation, an "electro-smog filter" (the VEF), which is inserted between wall outlet and appliance, special pendants to stabilize the personal energy field and a special pendulum used to test subtle energies.

Pulsors can be used by therapists who utilize them in special effective applications as a targeted therapy. And, by lay people, to place on their own body in a recommended pattern or placed in the bed to free the sleeping space of the impact of disturbing fields.

Surprising successes are possible with Pulsors. For example, the Swiss printing, off-set and multi-media company Linsenmann AG in Basel: in every department of the firm computers and other electronic equipment are utilized extensively, and thick cables of the internal PC-net are part of every room. Consequently, "the energetic impact is relatively high from the standpoint of subtle energy", declared CEO Thomas Kneuss in a lecture about the experiments with the use of various Pulsors during a three year period. Gradually the work space of their then 35 employees was harmonized. In excess of 30,000 Swiss francs were spent by the company during this period in sensitive analysis and harmonizing devices.

Only a few employees were informed of the function of the colored, round energy helpers and special Pulsor electro-smog filters. And for those participants artificial interferences in their homes from TV satellite installations were further reduced.

The other employees knew nothing and represented therefore a control group, ruling out the placebo effect through expectations of positive effects.

The expense and effort was worth it in terms of business and human benefits, insists Kneuss. Within one year of installation, the Pulsor group reported half as many headaches, joint pains, and general malaise, and their sense of well-being was markedly heightened.

ENERGY BALANCING THROUGH THE PULSE OF CRYSTALS

Prior to the installation of the Pulsors only 40% of the employees professed to feel good. A year later 70% reported a markedly increased sense of well-being. This translates into better attendance, less down-time due to illness and improved performance and output - although the CEO admits it is difficult to translate into bottom-line concrete figures.

According to the Swiss naturopath Christianne E. Kirchner-Thumm, the secret to the often surprising physical healing effects of Pulsors is that the emotional and spiritual problems which create energetic blockages, are dissolved through the use of Pulsors. Kirchner has instructed therapists in the use of Pulsors in the German part of Switzerland. Approx. 40 people, primarily from Switzerland, have been trained in several seminars as Vortex-Energy Therapists (a designation for Pulsor therapists). They report surprising results.

For example: the naturopath Ingrid Penzel of Kuesnacht reports that a 25 year old patient's eczema, which had been unsuccessfully treated medically for 2 years, cleared up completely after 17 Pulsor balancings. Pulsor therapist Verena Behrle in Zuerich reports similar experiences through regular Pulsor balancing within 3/4 of a year: the degeneration of a 70 year old woman's eyes was stopped, who otherwise would have gone blind.

Foot reflexologist Hanni Heimberg of Gstaad reports hastening of the healing processes: "When I add supportive Pulsors, most patients who are experiencing pain are pain-free after two or three balancing sessions."

Oliver Schaerer of Hegiswil utilizes Pulsors for the harmonization of houses and autos. He has neutralized interferences from over 150 homes during the past 4 years. His clients report, unanimously, that their sleep is more refreshing, headaches occur less frequently and medications could be reduced. Additionally, children seem to be able to concentrate better when learning and visitors feel better, claims Schaerer.

That these positive effects are not the result of wishful thinking, is demonstrated, apart from the previously described Linsenmann study, through blood tests conducted on animals. The Applied Biological Science Laboratory in Glendale, California tested on rats the influence of electromagnetic fields emanating from fluorescent lights. Two groups of animals were exposed to artificial light for 12 hours per day for three weeks. Pulsors were attached to artificial light fixtures of one group. A third group was not exposed to artificial light.

The results of this animal study were amazing: The rats' blood enzyme values under Pulsor lights were essentially unchanged and normal, while the values of unprotected rats under artificial lights deteriorated markedly.

These positive effects are astounding since they're supposed to be only a side effect of the Pulsors' effect. According to Yao, these energy frequencies are superimposed on the physical body. "The physical body is created from the auric energy fields, which determine the condition of the emotional and mental bodies and consequently influence the individual's thoughts and feelings", declared the inventor, (who recently died at age 76) in his book, *Miracle of Microcrystals*.

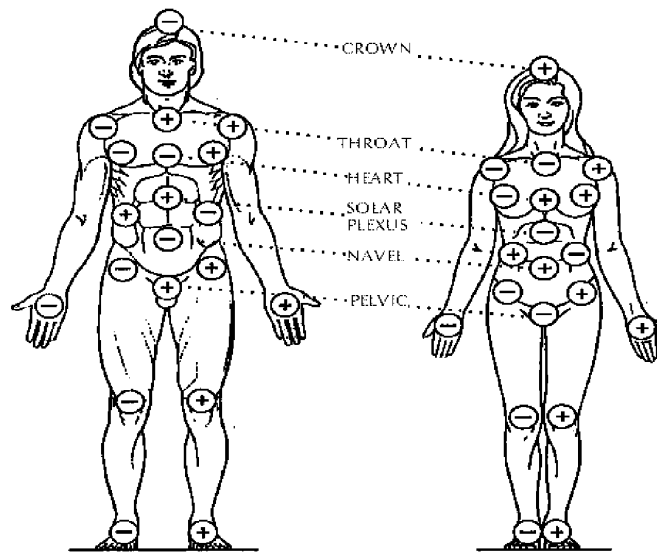

ENERGY BALANCING THROUGH THE PULSE OF CRYSTALS

The possible influences of Pulsors upon the aura can therefore also be utilized for personal and spiritual development; for example, to quickly achieve a state of total relaxation and reach a deep level of meditation, to generally strengthen the aura or to target the flow of energy to specific points in the spine, the chakras, which are the primary human energy centers.

The Pulsor trainer Kirchner-Thumm says:

Dr. Yao has created unique, multi-faceted "assistance" by inventing the Pulsors, which remove discordant frequencies from the bedroom and the office, and provide protection from electro-smog, facilitate the purification of groceries and contribute to personal growth.

VORTEX ENERGY CENTERS

PLEASE NOTE- Electrical Polarities are the reverse of Vortex Polarities

According to research conducted by the American molecular physicist and naturopath, Dr. George T. E. Yao, many stationary energy vortices connect the subtle human energy bodies with the physical body. The location of some of these correspond to the well known chakras (in Indian teachings the primary human energy centers). Others correspond to the important acupuncture points as described in Chinese medicine.

Yao designated three energy circuits, which traverse the body along the longitudinal axis. The central energy circuit corresponds to the location of the "small energy circuit" described in Chinese medicine as conception vessel meridian. In Chinese medicine this connects the main chakras. Next to it are the right and left circuits, each energetically supplying one half of the body. The vortices have, according to Yao, a certain established "polarity", which means they either take in energy (+) or give up energy (-). This polarity of the vortices changes from the front of the body to the back and vice versa. When these polarities are disrupted or disturbed, this will result in various manifestations of ill health.
